Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

# **Controlling HCl and SO<sub>3</sub> Emissions for U-MACT (equipment & sorbents)**

*Michael Thiel  
Jerry VanDerWerff*

**2011 Air Pollution Control Round Table**

**Cleveland, Ohio – July 12, 2011**

## Agenda

- **Why** DSI for HCl and SO<sub>3</sub> removal (U-MACT)
- **What** is Dry Sorbent Injection (equipment)
- **How** to achieve U-MACT limits (sorbents)

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Why Dry Sorbent Injection?

- EGU-MACT
  - What does the U-MACT state?
  - Various Technologies
  - Which Technology?
  - EPA's Comments
  - The Net
- Technologies
- Considerations
- EPA's Comments
- The Net

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## EGU-MACT

- EGU-MACT
- Technologies
- Considerations
- EPA's Comments
- The Net

*"Electric Generating Unit – Max. Achievable Control Tech."*

### Big Picture

- EGU-MACT: Amendment to CAA Section 112
- 1970: President Nixon signed Clean Air Act
- 1977: Clean Air Act Amendments address SO<sub>2</sub> (NAAQS)
- 1990: President Bush signed amendment focusing on NO<sub>x</sub>

### Past 10 Years

- 2000: EPA adds EGU's to source – 112(c)
- 2005: EPA vacates 2000 decision
- 2008: US Court of Appeals rules against EPA

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## EGU-MACT

- EGU-MACT
- Technologies
- Considerations
- EPA's Comments
- The Net

### 2008 Consent Decree Effects

- Under Section 112(c) Coal and Oil fired EGU's are to be on the source list
- Under Section 112(d) NESHAP for Coal and Oil fired to reflect "MACT" consistent with 112(d) #2 (Standards and Methods) and #3 (New and Existing Sources)
- EPA must sign into law a final rule by November 16, 2011

### Time Frame

- 3 Years to comply after final rule

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## EGU-MACT

- EGU-MACT
- Technologies
- Considerations
- EPA's Comments
- The Net

### Affected Units

- EPA estimates 1,350 Units across 525 power plant sites
- Half of EGU's do not have advanced APC equipment

### Pollutants

- Mercury – Targeting an overall 78% reduction
- HCl – Surrogate for acid gases; targeting an overall 91% reduction; targeting an overall 55% reduction of SO<sub>2</sub>
- PM – Surrogate for non-Mercury metals

### HCl Limit for existing Units

- 0.0020 lbs/MMBtu

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## EGU-MACT

- EGU-MACT
- Technologies
- Considerations
- EPA's Comments
- The Net

### What about SO<sub>3</sub>

- No specific limit mentioned in EGU-MACT
- EPA mentions SO<sub>3</sub> when discussing Hg
- Also, mentioned when discussing condensable PM
- DSI for HCl is a surrogate for SO<sub>3</sub> removal
- In addition to EGU-MACT, state limits/rules address SO<sub>3</sub>
- Lastly, SO<sub>3</sub> is a visible PR issue

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Technologies

- EGU-MACT
- Technologies
- Considerations
- EPA's Comments
- The Net

### Wet FGD

- Utilizes a slurry of alkaline sorbent; usually limestone
- Flue gas is sprayed or is forced through a pool of slurry
- Goal is high contact between water, calcium, and acid gas
- Massive system – large budget and longer schedule

### Dry FGD (“Semi-Dry”)

- Usually applied for SO<sub>2</sub> removal
- HCl applications primarily in waste incineration market
- Calcium based; high sorbent utilization
- Temperature manipulation to control humidity

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Technologies

- EGU-MACT
- Technologies
- Considerations
- EPA's Comments
- The Net

### Dry Sorbent Injection

- No water – it's dry!
- Injection directly into duct
- Need well-placed lance locations
- Location: SCR outlet; APH outlet; ESP outlet (w/ wFGD)
- Sorbents: Sodium or Calcium
- Dilute phase system (silos, blowers, convey line, etc.)

## Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

# Which Technology for HCl Removal?

- EGU-MACT
- Technologies
- Considerations
- EPA's Comments
- The Net

### HCl Levels

- Depends on coal and system loading
- Amount of HCl impacts viable technology
- High HCl may result in “unreasonable” sorbent rates w/ DSI

### SO<sub>2</sub> Control?

- Is SO<sub>2</sub> being regulated? If so, HCl may be in compliance

### Ash

- Ash sales may prevent the use of sodium
- Disposal costs

## Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

# Which Technology for HCl Removal?

- EGU-MACT
- Technologies
- Considerations
- EPA's Comments
- The Net

### Particulate Control Device

- ESP or FF
- Existing PCD capacity

### Cost

- Capital Costs versus Operating Costs
- Three technologies vary greatly
- Life Cycle: How long is APC equipment in operation?
- Lowest overall cost? It's complicated

### Schedule

- 1-Year or 3-Years?

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## EPA's Comments

- EGU-MACT
- Technologies
- Considerations
- EPA's Comments
- The Net

### HCl Removal

- Existing FGD's will capture HCl, HF, and HCN
- DSI has also been shown to capture these acid gases

### "Good" Candidates for DSI

- "Smaller" coal-fired units
- Low-Sulfur Coal
- Units that do not operate in a base-load mode

### Summary

- "EPA does not project use of wet scrubbing technology to meet the requirements of this proposed rule."

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## The Net

- EGU-MACT
- Technologies
- Comparisons
- EPA's Comments
- The Net

### Why DSI for HCl & SO<sub>3</sub>

- Low capital cost solution
- Effective for HCl & SO<sub>3</sub> removal
- Quick installation and start up

### The Net: Dry Sorbent Injection...

- ...is not the perfect solution for every application
- ...will be used by many to achieve HCl emission limits
- ...is the right choice for SO<sub>3</sub>

### Typical Components

- Truck/Rail Unload
- Storage
- Dust Collection
- Silo Discharge Assist
- L-I-W Feeders
- Dryers
- Blowers
- Heat Exchangers
- Convey Lines
- Splitters
- Injection Lances
- Electrical Control

### Optional Components

- Remote Unloading
- Milling Equipment
- Degree of Redundancy
- Degree of storage based on “Days of Storage” in spec.
- DCS or PLC
- Dehumidifiers
- CFD Modeling

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## How to achieve U-MACT limits (sorbents)

- Parameters
  - Factors governing removal efficiencies
- Calcium
  - Calcium (Hydrated Lime)
- Sodium
  - Sodium (Trona & Sodium Bicarbonate)
- Overlap
  - Overlap: Competing Reactions
- Scenarios
  - Scenarios

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Parameters Impacting HAP Removal

- Parameters
- Calcium
- Sodium
- Overlap
- Scenarios

### Factors that Impact Removal Efficiency

- Quantity and Quality of Sorbent
- Coverage of Duct (CFD Modeling)
- Temperature
- Mixing
- Residence Time (>1 sec)
- ESP/PJFF

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Calcium Sorbents

- Parameters
- Calcium
- Sodium
- Overlap
- Scenarios

### Calcium (Hydrated Lime)

### Application: Rules of Thumb

- More moisture in flue gas the better
- Level of removal dependent on “quality” of lime
- When mitigating SO<sub>3</sub> Hydrated Lime can be mitigated at lower temperatures and still achieve high levels of removal

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Sodium Sorbents

- Parameters
- Calcium
- Sodium
- Overlap
- Scenarios

### Sodium (Trona / Sodium Bicarbonate)

- Calcination Step:

- Reaction Step:  $\text{Na}_2\text{CO}_3 + 2\text{HCl} \rightarrow 2\text{NaCl} + \text{H}_2\text{O} + \text{CO}_2$

### Application: Rules of Thumb

- Hot temperatures are better

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Overlap: Competing Reactions

- Parameters
- Calcium
- Sodium
- Overlap
- Scenarios

### Order of Preferential Reactions

### Overlap: Rules of Thumb

- When injecting sorbent, which pollutant reacts first?
- When targeting 80%+ removal of SO<sub>3</sub> assume 20%-30% removal of HCl
- When targeting 80%+ removal of HCl assume 95%+ removal of SO<sub>3</sub> and 20%-40% removal of SO<sub>2</sub>

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Scenario 1

- Parameters
- Calcium
- Sodium
- Overlap
- Scenarios

### Plant Configuration

- Coal: Low Sulfur, Low Chlorine (i.e. Sub-Bituminous)
- Chlorine: 20-100 ppm
- SO<sub>2</sub>: 0.5-1.0 lb/MMBtu
- Boiler → APH → ESP

### Technology Strategy

- Use Dry Sorbent Injection for HCl
- Low Capital Cost
- Low Sorbent Cost

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Scenario 2

- Parameters
- Calcium
- Sodium
- Overlap
- Scenarios

### Plant Configuration

- Coal: High Sulfur, High Chlorine (i.e. E-Bituminous)
- Chlorine: 1,000-1,300 ppm
- SO<sub>2</sub>: 4.0-5.0 lb/MMBtu
- Boiler → APH → ESP

### Technology Strategy

- DSI is low capital cost but sorbent rates are high
- Consider adding PJFF to improve NSR
- Consider dry FGD, GSA, or wet FGD

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Scenario 3

- Parameters
- Calcium
- Sodium
- Overlap
- Scenarios

### Plant Configuration

- Coal: High Sulfur, High Chlorine (i.e. E-Bituminous)
- Chlorine: 1,000-1,300 ppm
- SO<sub>2</sub>: 4.0-5.0 lb/MMBtu
- Boiler → SCR → APH → ESP

### Technology Strategy

- DSI needed for SO<sub>3</sub> removal
- Consider adding PJFF to improve NSR
- Consider dry FGD, GSA, or wet FGD

# Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

## Scenario 4

- Parameters
- Calcium
- Sodium
- Overlap
- Scenarios

### Plant Configuration

- Coal: High Sulfur, High Chlorine (i.e. E-Bituminous)
- Chlorine: 1,000-1,300 ppm
- SO<sub>2</sub>: 4.0-5.0 lb/MMBtu
- Boiler → SCR → APH → ESP → wFGD

### Technology Strategy

- DSI needed for SO<sub>3</sub> removal
- HCl and SO<sub>2</sub> captured in wet FGD
- If wet FGD cannot make HCl EGU-MACT use DSI to help

## Controlling HCl and SO<sub>3</sub> Emissions for U-MACT

Why

What

How

### Closing

Why

- DSI a good option to attain HCl limits in EGU-MACT

What

- Dry Sorbent Injection is a low capital cost option

How

- Hydrated Lime, Trona, and SBC available sorbents
